## WHAT WE DO

### Software Engineering and Development Services

- Software solution development tailored to evolving mission needs
- Rapid capabilities and prototype development using Agile methods
- Vendor agnostic technology integrates with your current tech stack

### Natural Language Processing (NLP/NLU) & AI Development

- Integrated NLP product and capability development
- Automating intelligence analysis and GOV contracting efforts
- Developing capabilities to increase analysis efficiency by 300%

### Intelligent Collaboration & Information Sharing Solutions

- Created Cyber 9-Line for automated partner cyber information sharing
- Over 1200 integrated users across DoD, DHS, and critical infrastructure
- Provides real-time cyber situational awareness for decision-makers

### Machine Learning & Data Analytics

- Automating mission management between teams and mission
- Expertise in python, R, data modeling, and data engineering
- We move data to decisions at the speed of need

### Threat Intelligence Training & Curriculum Development

- 2000+ student trained since 2016
- Full-service training design, development, and delivery
- Integrated training for onsite, remote, hybrid environments
- Trains J2/J3 in support of Cyber Flag, Shield, Yankee, and Dawn exercises

### Cyber Engineering Services

- Vendor agnostic to platform, sensor integration, and analytic integration
- Expertise in cyber incident response, hunt, and threat analysis

### Research and Development

- Multiple R&D awards and SBIR Phase III awards
- Expertise in artificial intelligence, machine learning, and data analytics

### Malware Analysis and Training

- Integrated, automated, and dynamic analysis environments
- Partnerships with FireEye, CrowdStrike, Splunk, and open source vendors

TeamWorx Security is a certified 8(a) service-connected disabled veteran-owned small business. Spun out of the Johns Hopkins Applied Physics Laboratory, we have a successful track record across the federal government, cyber, and intelligence communities.

TeamWorx Security builds emerging technology to move people and mission at the speed of need in defense of critical infrastructure, the United States, and our allies. We leverage cutting-edge data science and software engineering techniques to create intelligent workforce technology. Whether automating parts of your workflow or creating a feature to support deeper collaboration, we create solutions for the challenges associated with distributed teams working cross multiple technologies.
